

## BLEND PPA FOR ECL MASTERBATCH

### *Designed For Extrusion Coating*

- Extrusion coating Lamination is a process used to produce a multi-poly structure based material used in food packaging
- Due to high line speed & T-die process, it often results in defects like lacing, die build up, mesh chocking, which results in delamination or poly missing
- **Blend Colours** has developed a **special PPA MB** that eliminates processing problems & increases productivity

#### Application

- Extrusion Coating
- Cast Film
- Lamination

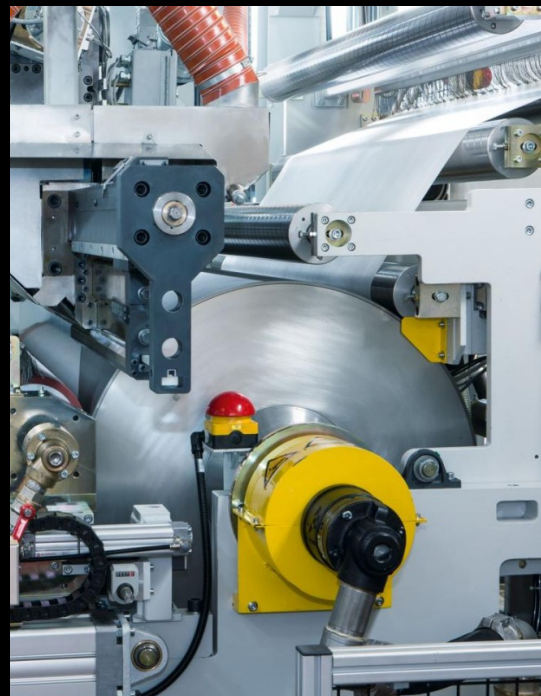

#### Technical Details

- Dosage: 2-3%
- Colour: Transparent
- MFI: 1-10g/10min

#### Performances

- Reduces operating pressure & increases output
- Eliminates melt fracture & die build-up
